Company profile:

For more than 55 years, the company has been working successfully in the field of precision mechanics and chemical apparatus. The development and manufacture of special designs in cooperation with national and international clients characterizes them.

Qualified and experienced employees as well as a modern machinery for the production makes the Air-Jet AG company to an interesting construction and outsourcing partner.

Manufacturing- / delivery programme:

Quick fasteners for pressure vessels

We are manufacturers of quick fasteners in different pressure classes from DN150 up to DN600. Air-Jet quick fasteners are approved and accepted by the Standards of *Pressure Equipment Directive* (PED).

Thermowells for temperature sensor

We produce protecting tubes for temperature sensors.
Variable connection possibilities with a wide variety of materials and workpiece dimensions.

Railway vehicles: pneumatics and mechanical assemblies

Tailormade manufacturing of brake valves, brake cylinders, wanking damper, brake rod controller and other parts.

Special pneumatics

Special valves for pneumatics and vacuum applications, pneumatic controllers, special cylinders

Special designs

We develop, design, construct and produce specific mechanical assembly exactly to customer specification. We see ourselves as your partner for the realisation of the entire project and all services are obtained from a single source.

Contract manufacturing

Manufacture of turning and milling components made of stainless steel, hastelloy, mild steel and nonferrous metals.
